

5 Ways Enterprise Portals Drive ROI from Bee-I

When you've made significant investments in BI and analytics software, but your still failing to see the expected return on investment...wouldn't you want to to change this?

UTILIZING PEOPLE & TECHNOLOGY

For every business, the path to success is paved with technology and people. No longer can you rely on manual or time-consuming processes, fight against barriers of access, and navigate legacy tech that's way out of sync with modern expectations. It is essential to keep your business and people moving forward.

5 Ways Enterprise Portals Drive ROI

1. CENTRALIZED SINGLE PORTAL FOR ALL BI & ANALYTICS

Creating a single portal for users to access multiple different analytics and BI systems (ABI) helps eliminates multiple portals, logins and disjointed experiences.

Digital Hive connects to each underlying system and creates a single place for users to access multiple existing BI. Simplify access, save users time and collaborate effectively with analytics.

2. FAST DISCOVERY OF KEY INSIGHTS

Users carrying out repetitive searches across many different systems, and duplicate BI development efforts to replicate existing reports or dashboards needs to stop. We want users to spend less time looking for something and more time analyzing and driving change.

Digital Hive gives users the power to search across all underlying systems with Google-like speed to find what they need, saving hours of time and valuable BI resource.

3. SMART, ENGAGING AND DATA DRIVEN

Our goal is to help keep users engaged and informed so the decisions they make are data-driven and not based on gut!

Digital Hive is designed to build intelligence through interaction and help users discover the content they need. We surface and recommend reports and information directly to users in line with their role, preferences and history to expand their knowledge and encourage the consumption of analytics.

4. PERSONALIZED AND MODERN CONSUMER APP-LIKE UX

We are spoiled by consumer apps like Netflix, Spotify and Amazon. They shape our expectations of technology experiences and this is where enterprise analytics is seriously lagging.

Personalization is a key pillar of Digital Hive. We allow each user to have a different view of their content all within the same portal experience. Everything is centralized, personalized and recommended, and displayed in an interchangeable Hive shaped to benefit a particular role and working style.

5. REPACKAGE YOUR EXISTING TECH AND MAKE IT STICK

You want to drive as much value out of your existing BI & analytics investments without having to rip out and replace, to provide your employees with an experience that keeps them coming back for more.

Digital Hive is a cost-effective pragmatic solution that promotes greater collaboration and flexibility across the organization. Utilizing Digital Hive, users no longer need to think about which system to use, just what information they need to do their jobs.
